

## Fractions

Write your answers first as an improper (top-heavy) fraction, and then as a mixed fraction in its simplest form.

Q1  $\frac{4}{5} \times 3 = \boxed{\frac{12}{5}} = \boxed{2 \frac{2}{5}}$

Q2  $\frac{5}{8} \times 3 = \boxed{\frac{15}{8}} = \boxed{1 \frac{7}{8}}$

Q3  $\frac{2}{3} \times 2 = \boxed{\frac{4}{3}} = \boxed{1 \frac{1}{3}}$

Q4  $\frac{4}{6} \times 4 = \boxed{\frac{16}{6}} = \boxed{2 \frac{2}{3}}$

Q5  $\frac{3}{4} \times 5 = \boxed{\frac{15}{4}} = \boxed{3 \frac{3}{4}}$

Q6  $\frac{5}{7} \times 2 = \boxed{\frac{10}{7}} = \boxed{1 \frac{3}{7}}$

Q7  $\frac{1}{2} \times 3 = \boxed{\frac{3}{2}} = \boxed{1 \frac{1}{2}}$

Q8  $\frac{3}{5} \times 3 = \boxed{\frac{9}{5}} = \boxed{1 \frac{4}{5}}$

Q9  $\frac{6}{8} \times 5 = \boxed{\frac{30}{8}} = \boxed{3 \frac{3}{4}}$

Q10  $\frac{1}{3} \times 4 = \boxed{\frac{4}{3}} = \boxed{1 \frac{1}{3}}$

Q11  $\frac{5}{6} \times 2 = \boxed{\frac{10}{6}} = \boxed{1 \frac{2}{3}}$

Q12  $\frac{1}{4} \times 5 = \boxed{\frac{5}{4}} = \boxed{1 \frac{1}{4}}$

Q13  $\frac{4}{7} \times 6 = \boxed{\frac{24}{7}} = \boxed{3 \frac{3}{7}}$

Q14  $\frac{3}{5} \times 8 = \boxed{\frac{24}{5}} = \boxed{4 \frac{4}{5}}$

Q15  $\frac{7}{8} \times 3 = \boxed{\frac{21}{8}} = \boxed{2 \frac{5}{8}}$

Q16  $\frac{5}{9} \times 6 = \boxed{\frac{30}{9}} = \boxed{3 \frac{1}{3}}$

Q17  $\frac{6}{7} \times 6 = \boxed{\frac{36}{7}} = \boxed{5 \frac{1}{7}}$

Q18  $\frac{3}{4} \times 6 = \boxed{\frac{18}{4}} = \boxed{4 \frac{1}{2}}$
